

FIG. 1 is a block diagram of a network system 10. The system includes a packet-switched network 12 (e.g., Internet) connected to a file database 34, an application server 20, a PSTN 14, a wireless network 16, and a telephone server 26. The telephone server 26 is connected to a group of mobile devices 24. A mobile device 32 is also connected to the wireless network 16. A desktop computer 18 is connected to the packet-switched network 12. A telephone 22 is connected to the packet-switched network 12. A telephone 30 is connected to the PSTN 14.

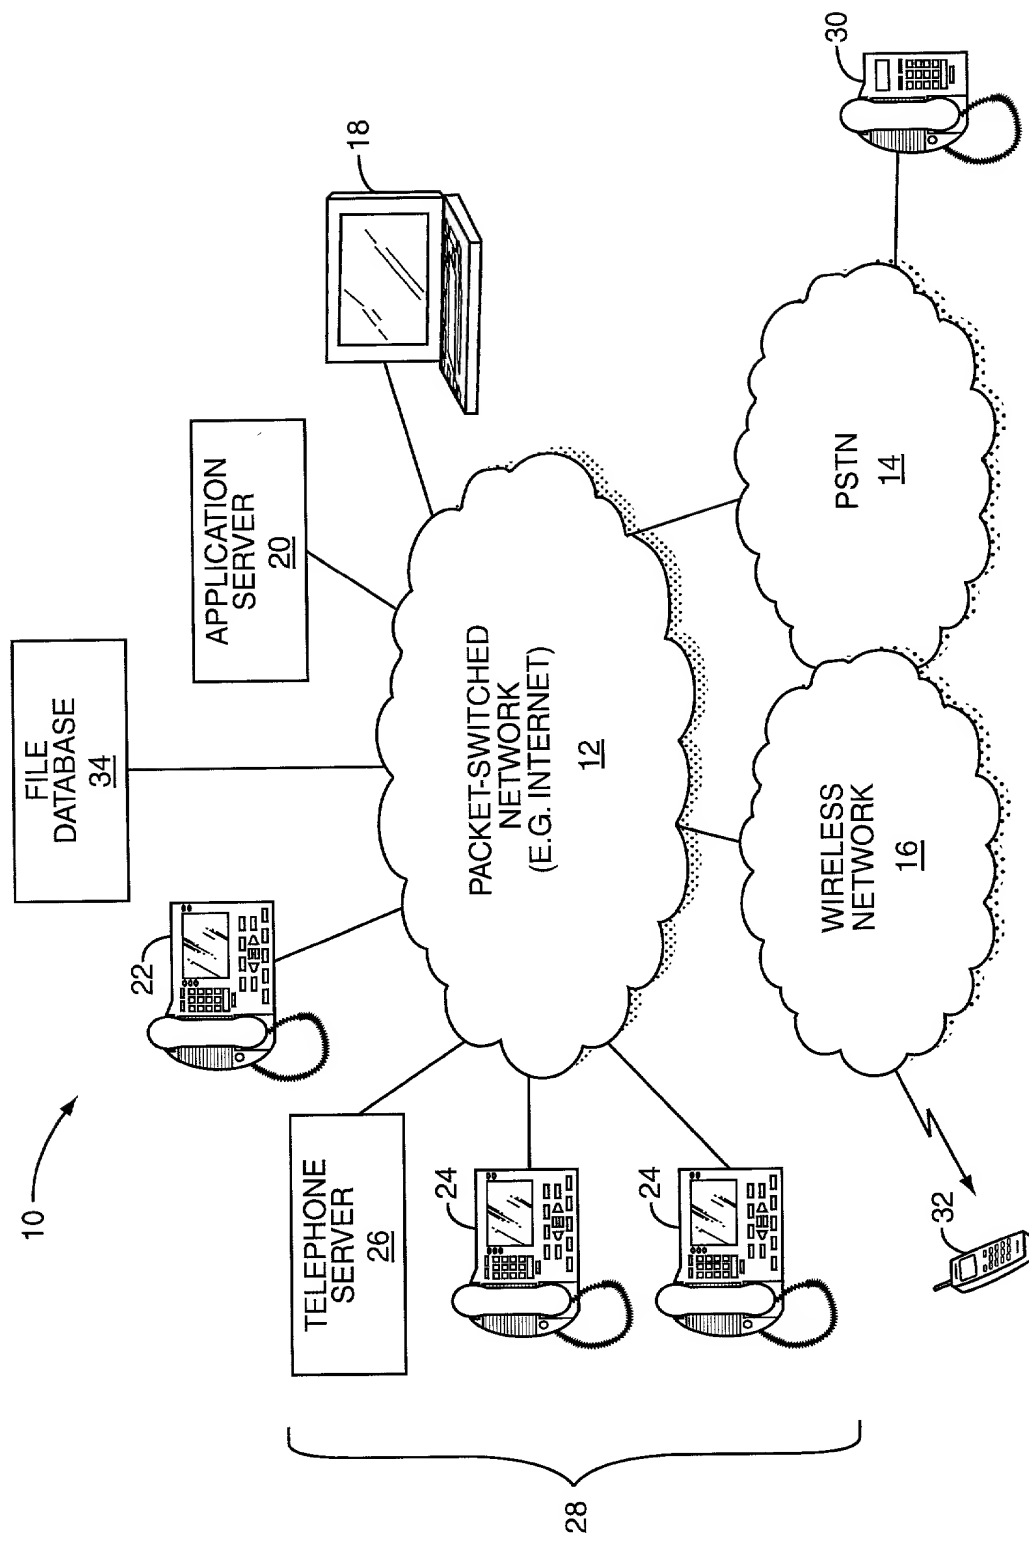

FIG. 1

FIG. 2 is a block diagram of a system 36, according to one embodiment of the present invention. The system 36 includes a control system 38, a memory 40, a removable memory 54, a telephony interface 52, an auxiliary interface 56, an audio processor 46, a speaker(s) 48, and a microphone(s) 50. The control system 38 is connected to the memory 40, the removable memory 54, the telephony interface 52, the auxiliary interface 56, and the audio processor 46. The memory 40 includes software 42 and data 44. The audio processor 46 is connected to the speaker(s) 48 and the microphone(s) 50.

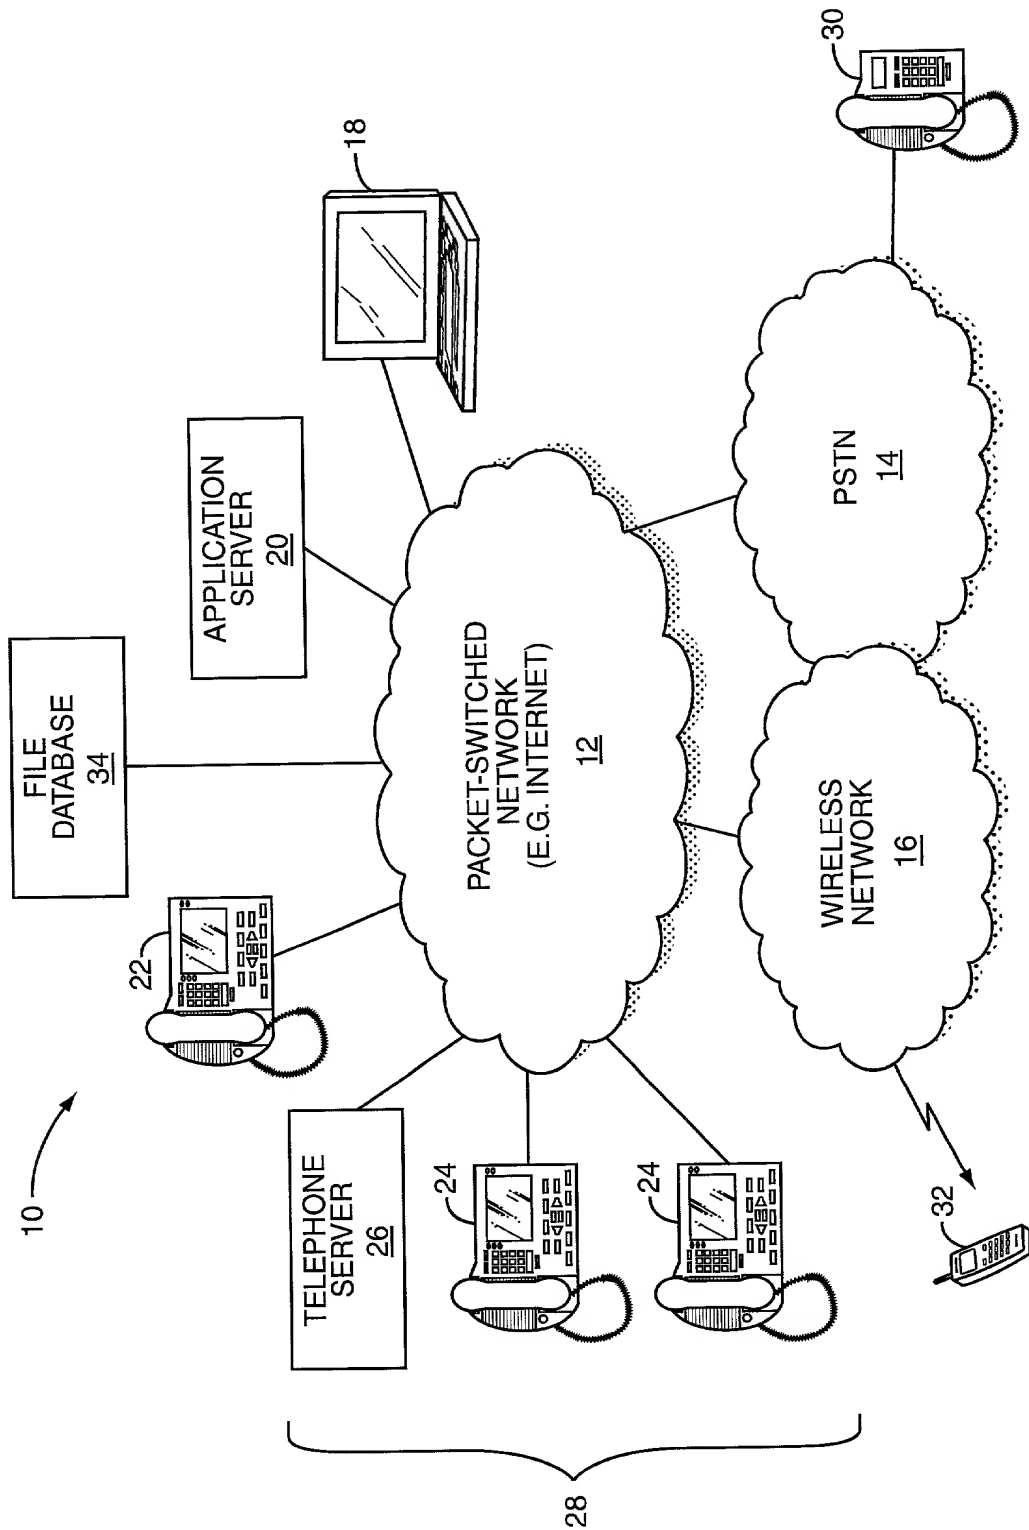

FIG. 1

FIG. 2 is a block diagram of a system 36. The system 36 includes a control system 38, a removable memory 54, a memory 40, a telephony interface 52, an auxiliary interface 56, an audio processor 46, a speaker(s) 48, and a microphone(s) 50. The control system 38 is connected to the removable memory 54, the memory 40, the telephony interface 52, the auxiliary interface 56, and the audio processor 46. The memory 40 includes software 42 and data 44. The audio processor 46 is connected to the speaker(s) 48 and the microphone(s) 50.
